

Care for Vinyl, PVC and CV Flooring

Material Characteristics

Vinyl, PVC and CV floors are modern, resilient flooring solutions with high durability and easy care surfaces. They are resistant to everyday wear and feature a uniform, sealed wear layer.

Their elastic structure provides comfortable walking and makes them suitable for both residential areas and high traffic zones.

Indoor Climate

A constant indoor temperature between 18 and 24 degrees Celsius is ideal. Extreme temperature fluctuations and permanent moisture should be avoided.

With underfloor heating, the surface temperature must not exceed 27 degrees Celsius. Even heat distribution supports dimensional stability.

Initial Treatment After Installation

After final construction cleaning, no initial treatment is mandatory. In heavily used areas, a protective coating may be applied.

Regular Cleaning

Clean regularly with a damp mop using a suitable PU cleaner. Follow dosage instructions carefully.

Recommended

- Entrance mats
- Regular refreshing treatment
- Suitable chair castors

Avoid

- Overdosing cleaning agents
- Abrasive cleaners
- Unsuitable pads

General Information

These recommendations reflect the current state of cleaning technology. No liability is assumed in individual cases.

Slip resistance is significantly influenced by care and cleaning.

We are happy to advise you personally and provide the care products precisely matched to your floor at Teppich & Parkett CC AG.
